

Power of the green™

Venetian Series MULTI-SLIDE DOOR (S-6800)

GREEN WORLD WINDOWS MULTI-SLIDE DOOR

Modern living aspires to feelings of openness, space and light. Green World Windows 6800 Series Multi-Slide Doors and Windows are the epitome of design and functionality. While in the closed position, our Multi-Slide systems are aesthetically pleasing with their narrow sightlines and enormous expanses of glass. Customers love the bold vertical lines and massive panel size options. No stacking door system is better for capturing a custom view. However, we know the real reason you will love our Multi-Slide products: they disappear. Every panel can slide and stack to the side, opening entire rooms to the gorgeous weather while you entertain. Go ahead, impress your friends and let Green World Windows moving walls of glass open your world.

For harsher environments we offer unique thermal insulation technology on both our frame and panels. Using Aluminum-plastic combination technology, high quality Vinyl material does well in heat insulation. This protective barrier keeps the heat or cold air outside and then offers us a comfortable living environment. By the use of Green World Windows' high quality Vinyl material, we can offer our customers innovative solutions to extreme temperatures such as high humidity and intensely hot or cold weather. This technology also helps reinforce Green World Windows green theme of sustainability, and ensures that our customers save money on their utility bills while lowering their total carbon footprint.
